

The Home page (index.html) has a simple, clean responsive layout which will be consistent and shown in the other pages on the site. The consistency in layout and design will make this site visually appealing and user friendly. Also the text sections having coloured titles with matching coloured Font Awesome icons helps to section off each part without the need for coloured backgrounds being applied. The main colours are consistent throughout, with only the images and possibly the logos for the the social media as well as the Babolat having more colours applied than is the colour theme, although I can use the Font Awesome icons and colour these with CSS formatting.

I have tried to show as best as I can the responsiveness of the website on different devices such as a desktop viewport, tablet viewport as well as mobile device viewport.

The About page (about.html) is styled exactly the same as the home page as this keeps with the theme and has a simple, clean, responsive layout that is consistent all the way through the website.

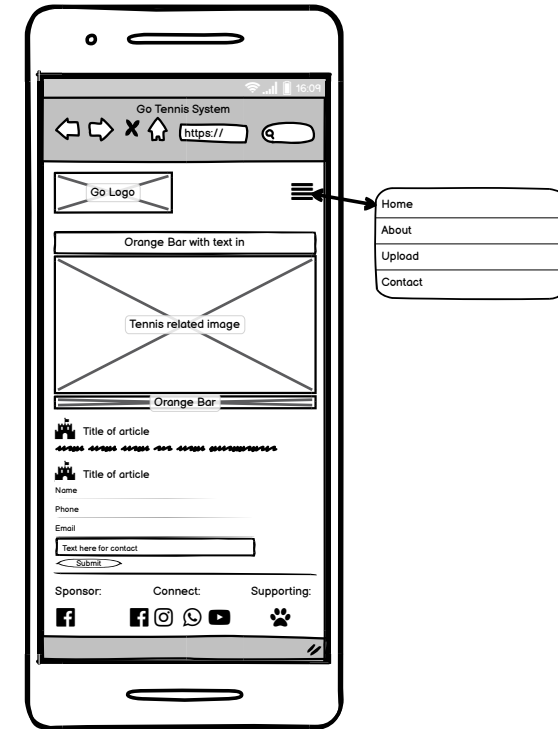

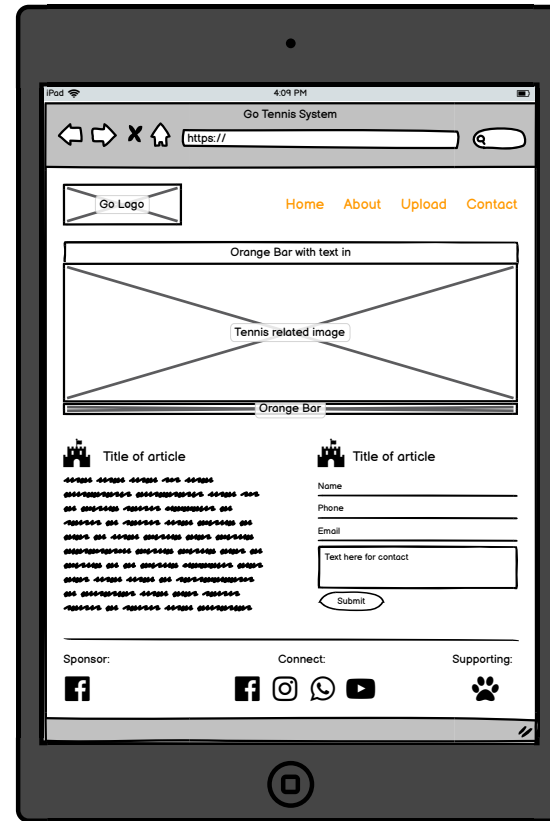

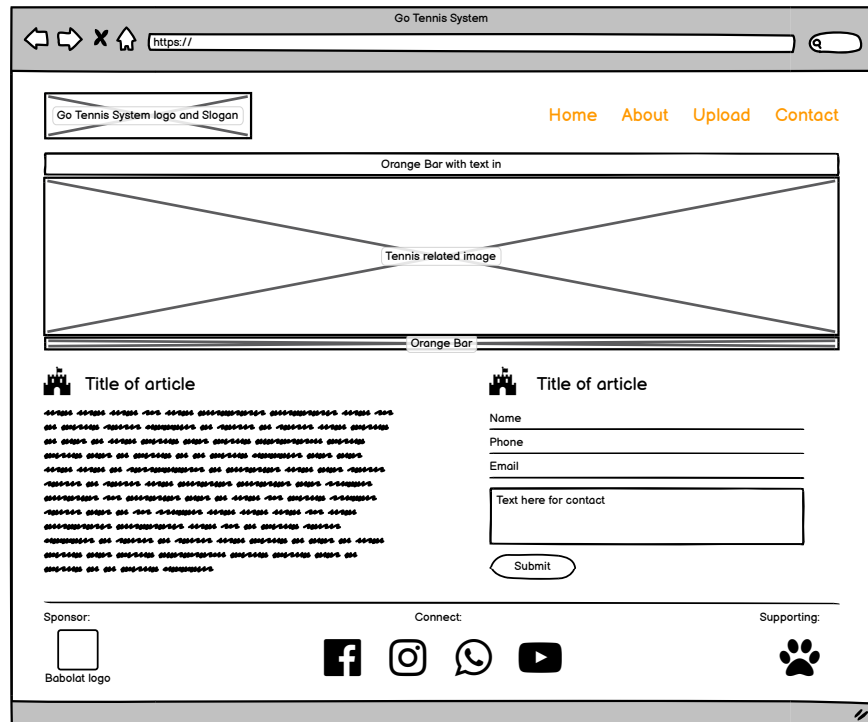

I have tried to show as best as I can the responsiveness of the website on different devices such as a desktop viewport, tablet viewport as well as mobile device viewport.

The Upload page (upload.html) is styled exactly the same as the other pages although has the space to submit your contact details as well as a button to donate and upload. This button will be active although will not function properly (in the way of being able to donate or possibly even upload) as I haven't covered this on the Code Institute course yet, but I will Google to see if there is a way to get this to allow you to upload at the very most. If I manage to find this out I will place in the README.md as well as in the code the credited source for this.

I will use a Bootstrap button but will style this with CSS to achieve the look and feel that I want and to keep in the style of the main website.

I have tried to show as best as I can the responsiveness of the website on different devices such as a desktop viewport, tablet viewport as well as mobile device viewport.

The Contact page (contact.html) is styled exactly the same as the other pages although has more similarity to the Upload page (upload.html) with the form to fill in, but has the text box for writing your own message to contact Go Tennis System. The submit button will work and will have an orange colour, and will be lighter on hover, this will be a working button as I have covered how to do this on the Code Institute course. I will use a Bootstrap button but will style this with CSS to achieve the look and feel that I want and to keep in the style of the main website.
